

**PESSARIES:  
What do you need to  
know?**

Katherine Marchese, MSN, ANP, CUNP  
North Shore University Hospital System  
Department of Urology

---

---

---

---

---

---

---

---

**Historical Perspective**

- Ancient Greece: insert 1/2 of a pomegranate
- Late 1500's: oval shaped devices of hammered brass and waxed corks
- Potatoes

2

---

---

---

---

---

---

---

---

**What is a pessary?**

- A medical device placed in the vagina and used to support a pelvic organ prolapse.
- A non-surgical option for those not wanting surgery or poor surgical candidates.
- Made of an inert plastic or silicone that minimizes vaginal odors and absorption of vaginal secretions.
- Comes in a variety of shapes and sizes.

3

---

---

---

---

---

---

---

---

4

---

---

---

---

---

---

---

---

**What are pessaries used for?**

- Diagnostic tool
- Pelvic organ prolapse
  - Uterine
  - Vaginal
  - Rectal
  - Bladder
- Urinary incontinence
  - Stress incontinence
  - Mixed incontinence
  - Not used for urge incontinence

5

---

---

---

---

---

---

---

---

**Goals of pessary therapy**

- Prevent worsening of the prolapse
- Reduce prolapse symptoms
- Find a pessary that fits properly, is comfortable for the patient and doesn't interfere with voiding and defecation
- Patient is able to retain pessary with activity.

6

---

---

---

---

---

---

---

---

### The Cons of pessaries

- Vaginal infections
- Erosion, fistula, impaction.
- Vaginal discharge/odor
- Pain
- Vaginal bleeding
- Expulsion

---

---

---

---

---

---

---

7

### Choosing the right patient

- Pessary works best if uterus is still in place.
- Patient must be OK with a foreign object in the vagina.
- Patient must be willing to remove/clean the pessary or schedule a 3 month f/u visit.
- Patient may need to use topical estrogen.

---

---

---

---

---

---

---

8

### Who is not a candidate?

- Active vaginal infection.
- Pelvic inflammatory disease
- Unwilling/unable to participate in care.
- Severe vaginal atrophy

---

---

---

---

---

---

---

9

### Symptoms of a prolapse

- Symptoms are worse the higher the grade of the prolapse.
- Obstruction of the bladder neck.
- Urinary Incontinence.
- Urinary retention.
- Incomplete emptying of the bowels
- Palpable prolapse.
- Back pain.

---

---

---

---

---

---

---

---

10

### Types of prolapse

- Urthrocele
  - ⊗ Lower **anterior** vaginal wall
  - ⊗ Involving **urethra only**
- Cystocele
  - ⊗ Upper **anterior** vaginal wall
  - ⊗ Involving **bladder**
- Urethrocyстоcele
  - ⊗ As above with associated prolapse of urethra

---

---

---

---

---

---

---

---

11

### Utero-vaginal prolapse

---

---

---

---

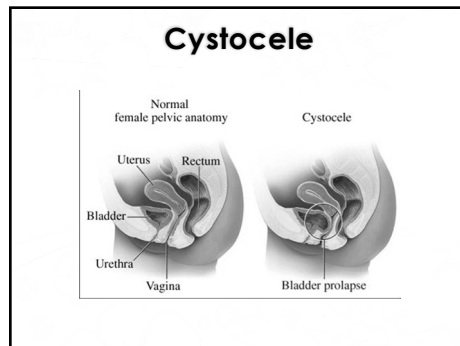

---

---

---

---

---

---

---

23

---

---

---

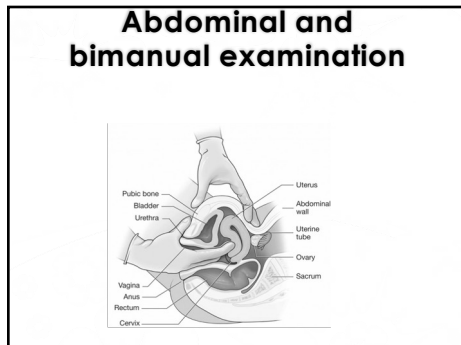

---

---

---

---

---

24

---

---

---

---

---

---

---

---

### How to fit a pessary

- Have patient empty her bladder first.
- Identify the type of pessary to use
- Measure to determine the best size
- After pessary is in place, have the patient perform Valsalva.
- Patient should be able to sit, stand, urinate without discomfort

25

---

---

---

---

---

---

---

---

### Fitting ( cont)

- Insert the middle finger of your dominant hand into the vagina and behind the cervix in the posterior fornix.
- Slip your index finger against the pubic notch.
- Estimate the distance between the 2 fingers.
- The estimated distance correlates to the size of the pessary you will be using.
- Have the patient stay in the clinic for about 1 hour. Have her squat, walk around and try to urinate.
- Before discharge, re-check the position of the pessary.

### Insertion of ring pessary

31

---

---

---

---

---

---

---

---

### Management

- Patients may self manage
    - ⊗ May remove and replace pessary themselves. Wash pessary with gentle soap.
    - ⊗ May remove for sexual activity
    - ⊗ Still need 1 week, 2 month and then every 3 months.
- Patients prefer to come into clinic for 3 month visit and cleaning

32

---

---

---

---

---

---

---

---

### Conclusions:

#### What you know about pessarys!

- Pelvic organ prolapse and urinary incontinence are the major indications for pessarys.
- Practitioners choose the type of pessary based on severity of prolapse, symptoms, interest in sexual activity and ability of the patient to participate in self care.
- Most common side effects of pessary use are vaginal discharge and odor.
- Pessaries provide a viable non-surgical option.
